TEETH WHITENING

Teeth whitening involves bleaching your teeth to make them lighter. It can't make your teeth brilliant white, but it can lighten the existing color by severa non-invasive treatment that aims to improve the overall appearance of a person's smile.

The very best part is that the results are almost visible instantly. You'll leave the office beaming with satisfaction. If you have been considering whitenir whitening is by far the unrivaled treatment option.

WHAT MAKES LASER TEETH WHITENING SPECIAL?

Laser teeth whitening is a dental procedure that involves the use of a laser to enhance the effectiveness of a tooth whitening agent, usually a hydrogen does laser teeth whitening produce fast results, but it is also the safest treatment plan.

WHAT HAPPENS DURING TEETH WHITENING?

The dentist will take an impression of your teeth to make a mouth guard and tell you how to use it with a bleaching gel. Then, using your mouth guard a the gel for a specified period of time over a few weeks. Some whitening gels can be left on for up to 8 hours at a time, which can shorten the treatment Laser whitening, also known as power whitening, is another type of teeth-whitening system that a dentist can provide. A bleaching product is painted o or laser is shined on them to activate the whitening. Laser whitening takes about an hour.

WHAT ARE THE PRIMARY CAUSES OF TEETH DISCOLORATION?

1. Extrinsic Discoloration:

Food and Drinks: Consuming certain foods and beverages, such as coffee, tea, red wine, berries, and deeply pigmented foods, can stain the outer layer

Tobacco Use: Smoking or using other tobacco products can lead to yellow or brown stains on teeth.

Poor Dental Hygiene: Inadequate brushing and flossing can result in the accumulation of plaque and tartar, causing teeth to appear yellow or stained.

Certain Medications: Some medications, such as tetracycline antibiotics, can cause discoloration in developing teeth, especially in children.

2. Intrinsic Discoloration:

Dental Procedures: Some dental treatments, such as root canal therapy or certain fillings, may cause intrinsic discoloration over time.

Fluorosis: Excessive fluoride intake during tooth development can lead to fluorosis, causing discoloration and white spots on the teeth.
